Glenda,

Tamara at DIAND called me yesterday re Snap Lake and a proposal by NWT power corp to do a feasibility study for a power line to Snap Lake. She was concerned with respect to cumulative impacts. I told her that given the terms of reference unless this was a project that was identified when the terms of reference were released then the Power corp stuff doesn't get captured in the Snap Lake project. The Power Corp will have to do the cumulative effects analysis including the Snap Lake project.

Ultimately, I advised her to contact you to discuss and maybe put a note on the record to say that it was dealt with according to the terms of reference.

Have a good "cold" weekend.

Heidi
