Subject: Winter Geotechnical Work

Hi Peter,

I have been reviewing the DAR submitted to the Review Board for the winter geotechnical work.

In the Land Use Permit application, Imperial says that the borehole locations will be a maximum of 6 m x 10 m and that the test pit locations will be a maximum of 6 m x 15 m. However, in the DAR, the maximum sizes have increased to 10 m x 10 m and 25 m x 25 m, respectively.

Why have the clearing sizes for the boreholes and test pits been increased in the DAR from what was applied for in the LUP?

Thanks,

Joe Acorn
