Subject: Jay Hearing - Day 1, Undertaking 4

Hi Chuck,

I am writing about Undertaking 4 on Day 1. The text for this was, "The GNWT is to provide LKDFN with the specific steps needed to complete new air quality regulatory tools (under the existing EPA)."

I am writing because I am not satisfied with the response. The undertaking clearly includes the word "specific." What was provided were very general guidelines. I want to know why the GNWT is taking such a long time to develop binding air quality standards and why they can't even give us a timeline or a workplan. I am sure there is a reason and they have stated that the reason is because this "is complicated." I want to know what these complications are and I think I was clear about that. What was provided doesn't answer any of my questions. What are my options if my question is not answered?

Thank you,

Peter Unger
