

Note to file

EA 0809-002

Canadian Zinc Corporation, Prairie Creek Mine

March 13, 2009

On March 11, 2009, Review Board staff discussed the ongoing Prairie Creek Mine environmental assessment with Graeme McLaren of the British Columbia Environmental Assessment Office (BC EAO).

In particular, the discussion was to officially notify the BC EAO of transportation plans related to the use of the Liard Highway to truck concentrate to the railhead in Fort Nelson, BC, and to initially discuss any trans-boundary implications.

Mr. McLaren appreciated the courtesy, identified that the BC EAO does not currently see any triggers of the BC Environmental Assessment Act associated with the Prairie Creek Mine, and noted that BC EAO has referred its Northeastern Manager's Committee to the Review Board website public registry for this file in case they would like further information.

As always, if you have any questions, comments or requests for information, please contact me.

Regards,
