Prairie Creek All Season Road Project, Canadian Zinc Corporation

To: Distribution List

Re: Participation at June 13-16 technical session in Yellowknife

The technical session for this EA start next Monday. The [agenda](#) describes the purpose and logistics for the technical session. This notice of proceeding will help you prepare to participate effectively in the limited time available.

During the technical session, the Review Board encourages parties to:

- **focus questioning** on the issues **where changes to components** of the biophysical, social, or cultural environment as a result of the project **could lead to significant adverse impacts** to the environment or people
- ask questions that will provide you with information on **specifically how** these impacts could occur (that is, the causal mechanism)
- ask **clear questions** that will result in responses that will give you sufficient information, and encourage constructive discussion
- **focus discussion on significant issues** – those that matter most to you
- be prepared to discuss **how much change you think would be significant** and why
- **prepare your questions ahead of time**, and keep them concise so that maximum time can be spent answering
- **reference** relevant public registry **documents and page numbers** to provide context to your questions. If you reference other material, be prepared to submit it to the public registry.

The contact for this environmental assessment is Environmental Assessment Officer Sachi De Souza (867) 766-7054; sdesouza@reviewboard.ca.
